

Splitproof SelectGuard™ Panels

Panels in exterior wood doors can be subject to extreme weather and varying temperatures throughout the year. This can have an effect on solid wood panels not properly protected and maintained. This is where Simpson's SelectGuard™ panels can save the day.

SelectGuard panels are made with a medex (exterior grade MDF) substrate and beautiful furniture-grade veneers over the surface. The result is a panel that will not expand, contract or split, and the consistent grain and color of the veneers will give it an unmatched beautiful appearance within your door.

- Beautiful panels with splitproof guarantee
- Choose from 2 panel profiles: ¾" thick flat panel or 1-7/16" scoop single hip-raised panel
- Now available for doors with WaterBarrier® technology or Nantucket Collection™ doors
- Easy to select as a panel option on EZQ

Panel Options

1-7/16" SelectGuard Veneered Scoop SHRP

3/4" SelectGuard Veneered Flat Panel
